Assessment T001-3

Name: 4-kushwanth

Reg No: 192424150

course

computer vision awith opercu

code: 050205

1 Image contains

high-frequency noise.

-) Allows low-frequency components to pass -) Blocks high-freavency noise.

→

- Removes unwanted noise from the image...

12 Preserve low−frequency

components while removing roise.

-) Passes low freau encies smoothly.

- Gradually atten vates high freawencies. →

preserve important Image

information.106 5 **Edge**

enhancement in frequency domain.

-) Removes low-frequency

components.

-) preserves high-freavency details

tike edges. -) enhance edges and eine

details.

4) sharpens the image.

sweeth version of an image.

cemons high-frewrency

components.

J keep tow-frequency information.

Resort's

Jsnage becomes smooth.

-) Netse decreases:

An object is clearly brighter than the background. Explain and Justify the segmentation techniane. → select a threshold valve.

-) Pixels above threshold -) object.

(-) Pixels below threshold -) Background.... -) works well when object is much brighter.

1 separate foreground and background based on intensity.

-) choose one threshold.

-) Fore ground intensity threshold-

-) Dilation connects broken edges

- Erosion restores object shape

→ Improves edge continuity.

ℷ

Removes small gaps.

you need to extract object outlines **from an** image. Describe and

A perform erosion
apply an appropriate techniane.

→ subtract eroded image from original image.

7 Formula -Boundary =Voriginal Image − Eroded **Image**

A clearly identifies object boundaries.

50100
